

Caught between two stools

Overview

EM investors are on the fence. On the one hand, President Donald Trump indefinitely extended the ceasefire and this shows that the US wants to progress towards a deal. At the same time, we believe Trump will increasingly need to find an off-ramp as the midterms approach (not necessarily in the short term, but at some point closer to the summer). This provides some relief to EM investors. On the one hand, it is unclear the conditions under which the US-Iran talks will take place. And how a compromise could be reached, given that the conditions set by the two camps are very far apart from each other. EM currencies have roughly recovered in April after having weakened in March. In our view, there is a risk that things get worse before they get better.

Main strategies

- China: modest improvement in domestic demand
- Asia: navigating crosscurrents
- Hungary: too early to cut rates despite the election results
- Latam: revisiting our FX forecasts

Trade ideas

EMEA: Hungary to stay put post-election

- The election results and the forthcoming political changes potentially open the door to more dovishness.
- But it is too early to cut rates for four reasons. We see the NBH staying put at 6.25% next week.

Too early to cut rates

The NBH will decide on interest rates next week. It will be the first MPC after the election, and the victory of Peter Magyar. We expect the NBH to keep its policy rate unchanged at this stage. The election results and the forthcoming political alternance have opened the door to a more dovish approach overall, but it is too early for the central bank to decide to cut rates, yet.

Net fuel exports (% of GDP – 2024)

Source: World Bank, RMA by Crédit Agricole

It is about the oil price

First, is the reason to keep rates on hold is about the war in Iran and the oil price. Hungary is the largest fuel importer as a percentage of GDP in EMEA. The uncertainty remains huge about a possible agreement between the US and Iran, and the traffic in the Strait of Hormuz. When deciding on rates, the NBH has to consider the possibility of energy prices remaining high for a prolonged period.

HUF: real effective exchange rate

Source: World Bank, RMA by Crédit Agricole

Second, prices have been capped by administrative measures deliberately put in place by the government. The removal of these caps will likely push up inflation,

possibly by about 1.5ppt. For the moment, the future new PM seems to agree to keep the price caps on gasoline and diesel, but he may remove them at some point in the future. This is also something the NBH has to take into account.

The HUF appreciation has its limits

Third, a stronger HUF may provide more leeway to cut rates, by doing part of the tightening job. However, one has to take into account that the HUF's real effective exchange rate has already appreciated significantly. The HUF currently stands 13% above its five-year average. This somewhat limits further appreciation. Vigilance when it comes to monetary easing remains key.

EU fund flows: to be handled with care

Finally, the government will work with the EU to free aid flows. We estimate that currently suspended EU funds available to Hungary across the Multiannual Financial Framework, RRF and SAFE defence loan facilities amount to 17.2% of GDP. The phased absorption of these funds should provide a meaningful medium-term tailwind to economic growth, while also contributing to stronger domestic demand and upward pressure on inflation.

In a nutshell, we believe it is too early for the central bank to cut rates or to commit to doing so in the short term. As such, we expect stable rates at 6.25% at the next meeting on 28 April.

sebastien.barbe@ca-cib.com

Asia: navigating crosscurrents

- **China: modest improvement in domestic demand.**
- **Asia: Philippines BSP likely to hike while Thailand's BOT may stay unchanged.**

China: modest improvement in domestic demand

China's economic growth momentum turned out to be stronger than expected, despite some disruptions to trade activities due to the Iran conflict. GDP growth accelerated to 5.0% YoY in Q1 from 4.5% in Q425, led by high-tech related manufacturing and services. The share of domestic demand contribution rose notably to 86% on rebounded investment growth. Nominal GDP growth quickened to 4.9%, the fastest since Q223, with the GDP deflator about to turn positive. That said, the divergence of domestic supply and demand indicators have continued, with export-backed IP growth holding up resiliently and outpacing retail sales and FAI growth. Property indicators remained in severe contraction. The global energy shocks lifted PPI inflation in March, with the first positive YoY reading in 41 months, though the price impact has been more limited to upstream, with final demand continuing to remain weak. We have recently revised up our CPI and PPI inflation forecasts, now expecting an average of 1.1% and 1.0% respectively in 2026.

So far in April, high-frequency data has indicated some modest improvement in the property market, with new home sales in 30 major cities rising 4.6% YoY. Auto sales continued declining, by 11% in 1-12 April. Export activities remained decent with container throughput volume growth at major ports rising 5.5% YoY MTD. Major energy and raw material prices continued rising rapidly, with that of coal, aluminium and copper up by 24.0% YoY, 21.9% and 26.7% YoY MTD respectively. We expect policymakers to reiterate their existing policy rhetoric at the Politburo meeting in end-April with no imminent rush to introduce major policy easing measures. China will likely take multiple target measures to manage the energy price shocks and alleviate cost pressures, amid the ongoing Iran conflict.

The improvement in sentiment around the Middle East has softened the CNY's safe-haven tendencies. While USD/CNY declined below 6.83 last week, the decline lagged that of peers. The CNY TWI turned lower and is currently holding slightly below 100, around the lowest level in a month. The onshore FX settlement data in March showed continued net selling of FX for CNY though the amount has fallen to USD16bn from USD43bn in February. It remained driven by goods trade while FX demand from services trade, capital flows and by onshore banks increased. Looking ahead, we expect a further slowing of CNY appreciation expectation and USD/CNY spot declines could slow towards 6.80.

The bull run in the CGB market continued, with 10Y CGB yields trading lower to 1.73% today (or equivalent to 1.63% before VAT reinstatement vs a historical low of 1.60%), while the 30Y-10Y spread narrowed to 49bp from 55bp in early April amid flattening curve pressure. Domestic bond buyers have defied strong Q1 GDP and the PBoC's net liquidity withdrawal, as liquidity conditions and government bond supply still matter. We think the short end of CGBs is rich, with yields within 3Y now trading below 7-day repo rates; thus, investors would still eye the longer end of the curve for carry. The MoF will kick off its special CGB issuance on Friday with a relatively large offering size in 30Y (RMB85bn vs RMB71bn last April), an indication of a pickup in duration supply in coming months. We maintain our view that the long end of CGB will stay range-bound, but turn more cautious as 10Y CGB yields moved to the lower end of our predicted range while the risk of inflation is tilting to the upside.

xiaojia.zhi@ca-cib.com

Hong Kong: dividend season and bond issuance

The Q2 dividend season is [approaching](#) and we estimate a total of close to HKD500bn will be paid from April to July. As in previous periods, the focus for dividends is on any potential impact on HKD liquidity. In the run-up to dividend payments, HKD liquidity could tighten before loosening gradually once dividends are paid. For Q2, the bulk of dividends will start being paid in June with a

concentration particularly in the week of 22 June with more than HKD100bn set to be paid out during the week by more than 120 companies. Based on currently available information, we estimate the top two payers for Q2 will be a telecommunications company paying out HKD52bn on 24 June and an internet company paying out HKD48bn on 1 June. The dividend repatriation flow could be a factor which weighs on the HKD in June.

The HKMA released its tentative issuance schedule for HKSAR Infrastructure Bond (IBP) and Government Sustainable Bond (GSBP) programmes for the period April to September 2026. The HKMA plans to issue HKD14.5bn of HKD bonds and CNY12bn of RMB bonds for the period. This compares to HKD16.75bn of HKD bonds and CNY11bn of RMB bonds in the last period from October 2025 to March 2026. For the upcoming issuances, the HKMA will be reducing short tenor (1-3Y) issuances as the issuance plan falls to HKD4.5bn (vs HKD7.75bn previously) for HKD bonds mostly coming via a decrease in the 3Y. RMB bond issuance in the short tenor falls to CNY4.25bn (vs CNY6.5bn previously) with decreases across the board. Medium-term (4-10Y) issuance is unchanged at HKD8bn for HKD bonds though there is lengthening of duration here as a small decrease in the 5Y is replaced by a higher 7Y and 10Y issuance. RMB bond issuance is raised to CNY7.75bn (vs CNY4.5bn previously) and also sees a higher duration with the addition of a 7Y. There is also a slight boost to longer tenor (10Y+) issuance as that is raised to HKD2bn (vs HKD1bn previously) with both the 15Y and 20Y upsized by HKD0.5bn. There is no longer tenor issuance for RMB bonds as was the case previously.

eddie.cheung@ca-cib.com

Indonesia: BI in wait-and-see mode to cushion external shocks

Bank Indonesia (BI) kept its policy rate (BI-rate) unchanged at 4.75% as widely expected, extending the pause since its last cut in September 2025 as supporting IDR stability has been prioritised. BI has turned more cautious regarding the impact from the Middle East conflict, seeing lower global growth (to 3.0% from 3.1%), higher inflation (to 4.2% from 4.1%) and tighter global financial conditions, which could likely lead to a wider current account deficit for the year (to 0.5-1.3% of GDP from the previous projection of 0.1-0.9%).

Following the dropping of its dovish stance in March, BI has tilted slightly hawkish by saying that the central bank is ready for monetary policy action to maintain the IDR and CPI, though without signalling any imminent policy actions from the meeting. That said, we still believe the bar for BI to pivot into a rate hike cycle is very high, given the promised policy synergy to support the government's ambitious growth target while incremental support from fiscal policy could be limited given the deficit limit.

Looking ahead, we expect BI to continue prioritizing the use of SRBI tools to attract foreign flows with higher yields rather than policy rate hikes, and to continue strengthening intervention in the NDF, DNDF and spot markets to cushion excessive moves in the FX market. That said, we would remain less constructive on the IDR before seeing signs of better foreign portfolio inflows in equity and bond markets. The coming MSCI review of Indonesia's equity market in June would be a key point to watch for passive equity fund flows.

jeffrey.zhang@ca-cib.com

Korea: Q1 GDP, April exports and WGBI inclusion

Korea's preliminary Q1 GDP figures will be released on 23 April. Currently Bloomberg consensus (2.6% YoY, 0.9% QoQ) and Infomax consensus (2.7% YoY, 0.9% QoQ) are already expecting better growth overall, compared to the Q425 prints (1.6% YoY, -0.2% QoQ). According to local news, a BOK official hinted on 21 April that the Q1 prints could "considerably exceed" the BOK's previous expectation (2.7% YoY, 0.9% QoQ) thanks to strong semiconductor sector performance and limited impact of the Middle East crisis in Q1. Thus, we note that the Q1 data print could be stronger than our forecasts (2.4% YoY, 0.8% QoQ), which reflect a greater Middle East impact. The market will focus on whether the Q1 data would be strong enough to revise the annual GDP growth forecast and the magnitude of the negative impact of the Middle East crisis in Q2. New BOK

Governor Shin Hyun-song said on 15 April that Korea's 2026 GDP growth could be below 2% but if there is less concern on the growth side, the BOK may focus more on inflation, though we expect the BOK to remain data dependent in the near term to monitor economic impacts of the Middle East crisis.

Korea's first 20-day exports continued to show strong momentum. Exports grew by 49.4% YoY, with semiconductor (182.5% YoY), computer peripherals (399.0%) and petroleum product (48.4%) exports surging, while automobile exports decreased by 14.1% YoY. In terms of export destinations, exports to China (70.9%), the US (51.7%), Vietnam (79.2%), the EU (10.5%) and Taiwan (77.1%) expanded broadly. Meanwhile, first 20-day imports grew by 17.7% YoY, with semiconductor (58.3%), semiconductor machinery (63.3%) and energy (6.8%) imports growing. Within energy imports, crude oil (13.1% YoY) and coal (13.5%) imports increased while gas imports decreased by 12.0%. By source, imports from China (29.3%), the US (31.5%), the EU (25.5%) and Taiwan (47.6%) increased. Imports from Saudi Arabia decreased by 29.1% due to the trade disruption, while imports from Malaysia (75.2%) and Russia (55.9%) increased, possibly due to Korea diversifying its energy import sources. Looking ahead, we expect April exports and imports to grow by 45.0% YoY and 15.9% YoY respectively. Strong export momentum mainly focused on the semiconductor sector would keep the wide trade surplus around USD22.44bn, much larger than USD4.80bn in April 2025, though it is likely to be smaller than USD26.24bn in March, given higher energy import prices.

Meanwhile, Korea's Ministry of Economy and Finance announced that it held investor relations sessions with FTSE Russell and eight major Japanese financial institutions, including GPIF. The MOEF noted that feedback from Japanese investors – major WGBI trackers – was mostly positive and said more inflows are expected as some investors are still setting up to invest in KTBs. Some investors requested better liquidity management for KTBs with maturities of 20 years or longer and noted that a smoother process with Euroclear and Clearstream would make investment easier. We expect more foreign inflows into the KTB market as the WGBI inclusion process will continue until November. For the upcoming May profile, we expect more foreign KTB net purchases from next week after the preliminary profile for rebalancing is announced on 24 April possibly after the US market close.

yeonjin.kim@ca-cib.com

Philippines: likely 25bp hike

We expect the Philippines BSP to hike its policy rate by 25bp on 23 April. While the market consensus is split between no change and 25bp hike, we think a hike is more likely, considering more hawkish comments from BSP Governor Eli Remolona that the BSP has room to tighten on 16 April. Regarding concerns about economic growth, he explained that the concern is not as significant as before, with better quality and increased government spending expected in H226. However, he noted that the GDP output gap would be more negative than before. On 9 April, the Philippines government said that it would reduce its non-essential government spending by 20% to create additional fiscal space to support sectors impacted by the Middle East crisis.

The Governor said that the BSP would focus more on inflation, especially on the second-round effects, which are happening slightly sooner than the BSP expected. On 7 April, the Philippines' CPI inflation in March rose to 4.1% YoY, higher than market expectations of 3.8% and up from 2.3% YoY in February 2026. Core CPI inflation, excluding selected food and energy items, also rose to 3.2% YoY, from 2.9% YoY in February 2026.

The governor's comments about the slightly sooner second-round inflation effects and his comment that the BSP has room to hike suggest that the BSP would likely act early on 23 April rather than waiting for the next BSP meeting on 18 June. If the BSP hikes at this meeting, it would be the first hike after the last hike at an off-cycle meeting in October 2023. For the next move after the potential hike in April, we will monitor inflation and growth data to see whether the BSP would prefer to hike further. Governor Remolona said that the BSP would not want to tighten too much. Therefore, further decisions are likely to be data dependent.

yeonjin.kim@ca-cib.com

Thailand: BoT to stay on hold, likely to signal no need for urgent hike

The Bank of Thailand (BoT) will hold its policy rate decision meeting on 29 April. We expect the BoT to keep the policy rate unchanged at 1.0%, while likely maintaining a neutral stance to reiterate no need for an urgent hike against supply-driven inflation. The BoT has already revised its 2026 GDP growth forecast to 1.3% from 1.9%, assuming the Iran war ends in the second half of the year, while CPI inflation is expected to rise to 2.5% from deflation in 2025. Thailand officials earlier suggested that average CPI inflation could rise to above 3.5% in Q2 from -0.08% in February. Meanwhile, the hit on the tourism sector would lead to a lingering impact on current account performance. This could suggest a likely longer process for Thailand to close the negative output gap, suggesting a high bar for the BoT to tighten before seeing inflation consistently breaking the target range of 1-3%. We would remain cautious on the THB though the recovery of portfolio inflows in April MTD has been supporting the FX after its substantial loss in March.

jeffrey.zhang@ca-cib.com

This document should not be used by a non legitimate recipient.

Latam: revisiting our FX forecasts

- We expect the MXN to weaken gradually going forward given our view that uncertainty around the USMCA (US-Canada-Mexico) agreement is likely to persist weighing on business and investors' confidence.
- We have revised the BRL profile stronger given the sharp improvement in the terms of trade and a more gradual easing by the central bank. We expect the BRL to still weaken given the fiscal challenges.
- We maintain our CLP forecast, expecting appreciation in H2, however a protracted war in the Middle East poses a risk to our constructive forecast given Chile's dependence on energy imports.
- We maintain our current PEN and COP forecasts based on our assessment of the fundamentals, acknowledging that the political outcomes in Peru and Colombia respectively could drastically shift the outlook in both directions.

Revisiting our LATAM FX forecasts

The resolution of the war remains elusive. Given the logistical hurdles, the oil futures do not envision normalisation of the energy markets at least until the end of the year. The energy shock is already being reflected in incoming inflation data and even if proved transitory presents a hurdle for the central banks that had been contemplating easing prior to the start of the war. EM currencies, however, have largely recouped their losses, while US equities have been in the green since the start of the war.

Performance across markets since the 2026 Iran war

Source: Macrobond

Among LATAM currencies, the MXN was the least affected by the terms-of-trade shock to begin with and by now has recovered all losses along with the rest of the LATAM complex. However, we expect the MXN to weaken gradually going forward given our view that uncertainty around the USMCA (US-Canada-Mexico) agreement is likely to persist weighing on business and investors' confidence. After months of informal talks and "exchanging views", the US and Mexico agreed to move formally to the first round of bilateral USMCA review on the week of 25 May in Mexico City. Considering that the first review deadline of 1 July would be coming up in just over a month from the formal kick off and that it took approximately 15 months to renegotiate NAFTA during Donald Trump's first term, our base case is that negotiations would continue through the deadline at which point the USMCA would become subject to annual review.

Among the other LATAM currencies, the BRL and COP appreciated strongly from the pre-war levels. In the case of the BRL, we believe the strength is partially justified and we revised the BRL profile stronger. Brazil's terms of trade has improved by 23% since the start of the war, meanwhile the increase in expected inflation for 2026 and rising expectations for 2027 point to a more gradual easing path by the central bank. Meanwhile, Flavio Bolsonaro viewed by markets as a more market friendly candidate has taken a slim lead vs the current president Lula in polls. We maintain a depreciating BRL profile however as we foresee an uphill

battle for either Flavio or Lula to address the fiscal challenges that we expect to come back into focus after the election.

In Chile, last week president Jose Antonio Kast presented a pro-investment tax reform legislation. The proposal is to gradually reduce the corporate income tax from 27% to 23% over 2027-29. Measures with immediate impact include a tax credit for employment, elimination of property taxes on primary residences for those over the age of 65, a 12-month zero VAT rate on new housing sales and temporary tax discount on capital repatriation. The fiscal cost of the corporate tax cut is mitigated through gradual implementation. The reform faces a wave of negotiations within the fragmented congress with the administration seeking approval before the 2027 budget submission in September. President Kast's approval rating has fallen sharply as oil prices have taken a toll on the economy and inflation outlook given Chile's dependence on energy imports. We expect the CLP to weaken in the near term, but stabilise and begin to turn should the Iran war find a resolution in the coming months. A protracted war presents a clear risk to our forecasts.

LATAM terms of trade

Source: Macrobond

LATAM FX performance and forecasted change

Source: Macrobond, Credit Agricole CIB

The outlook for COP and PEN remains clouded by the uncertainty of the upcoming presidential elections. Following the first presidential round on 12 April, the vote count, marred by procedural delays, continues. With close to 94% of votes counted, Keiko Fujimori (political right) maintains a convincing lead with 17% of the votes, while the second candidate Roberto Sanchez (far left) maintains a narrow lead of just about 15k votes vs Rafael Aliaga (far right).

In Colombia, the first round of presidential elections will be held on 31 May. Both countries will go to the run-off in June. For now, we maintain our current forecasts based on our assessment of the fundamentals, acknowledging that the political outcomes could drastically shift the outlook in both directions.

Trade ideas

■ Asia: Still paying China 5Y repo NDIRS, holding 5Y-2Y THOR NDOIS curve flattener and buy TWD vs G3 basket

Recommendation	Entry date/time	Entry level	Target	Stop loss	Now	Performance
Pay China 5Y repo NDIRS	20 Mar 26 (08:11 CET)	1.62%	1.85%	1.50%	1.55%	-7.5bp
jeffrey.zhang@ca-cib.com China: taking profit on long 5Y swap spread; entering pay on 5Y NDIRS Rationale: The PBoC's statement released on 18 March hinted at the reduced probability of policy rate cuts. We revised our inflation forecast for 2026 on the back of likely higher oil prices for longer and expect onshore investors to stay cautious on duration risk in the near term. We have entered a trade to pay 5Y repo NDIRS at 1.62% on reduced expectations of PBoC policy rate cuts and the risk of broadening inflation.						
5Y-2Y THOR NDOIS curve flattener	05 Feb 26 (08:00 CET)	25.5bp	5bp	40bp	34.8bp	-9.3bp
jeffrey.zhang@ca-cib.com Thailand: THOR NDOIS curve flattener Rationale: We expect Thailand rates to be more sensitive to the election result vs FX, and the bar for further THOR NDOIS curve steepener can be high according to our scenario analysis.						
Buy TWD vs G3 basket	05 Feb 26 (12:15 HKT)	USD/TWD: 31.68	+4%	-2%	USD/TWD : 31.4640	+1.8%
		EUR/TWD: 37.57			EUR/TWD : 36.9590	
		JPY/TWD: 0.2039			JPY/TWD: 0.1975	
eddie.cheung@ca-cib.com Buy TWD vs G3 basket Rationale: The TWD may find support despite the choppy USD, given Taiwan's economy continues to benefit from AI demand. NDF points are now trading at a premium which makes holding a TWD long less prohibitive than before.						

NEW Trade ideas opened since the previous EM Pulse
 For NDFs: target, stop-loss and current level (now) calculated on the basis of the remaining maturity
 Performance for FX trades is carry-adjusted

* We extrapolate from our end-of-quarter forecasts to produce extrapolated forecasts in exactly three months and six months from now, in order to compare them to the 3M and 6M FWD/NDF outright

Legend:

The main divergence between our view and the market that we want to highlight:

- Where we are more bullish than the market
- Where we are more bearish than the market

CACIB EM portfolio flow indexes

Daily portfolio flows – eight countries, debt and equity

Weekly portfolio flows – 27 EMs, debt and equity

Country performance index over the past week – debt

Country performance index over the past week – equity

Portfolio flow warning – eight countries, debt and equity

Cumulative portfolio flows throughout the year

Eight countries = the BRL, HUF, INR, IDR, KRW, PHP, THB and ZAR

The 'EM group' refers to the 25 countries on the equity side and the 27 on the bond side for which we have weekly, monthly or quarterly equity and debt portfolio flow data

Full details regarding the construction of the indexes and our methodology can be found in [EM portfolio flows: introducing our in-house flows indexes](#)

Calendar

Main data/event calendar

	Asia	EMEA	Latam	G10
Weds, 22 Apr		TRY – CBRT rate decision: higher oil prices and the uncertainty surrounding the Iran war should incite the CBRT to stay put ZAR – CPI (Mar), Retail sales (Mar)		
Thurs, 23 Apr	HKD – Unemployment Rate 3Mths (Mar): 3.8% YoY HKD – CPI (Mar): 2.0% YoY on energy and housing prices INR – PMI (Apr P) KRW – Consumer Confidence (Apr) KRW – GDP (Q1 A): 2.4% YoY, 0.8% QoQ PHP – BSP Overnight Borrowing Rate (23 Apr): close call but likely 25bp hike SGD – CPI (Mar) 1.9% YoY as energy prices push up inflation from 1.2% YoY previously TWD – Unemployment Rate (Mar): 3.34% broadly unchanged from last month TWD – Industrial Production (Mar): IP to climb to 28% YoY with support from tech industry	PLN – Retail sales (Mar): strong consumer demand	MXN – Retail Sales (Feb) MXN – Bi-Weekly CPI (15 Apr)	EUR – France, Germany & Eurozone PMIs (Apr)
Fri, 24 Apr		RUB – CBR rate decision: no big push in inflation and the RUB appreciating since mid-March, suggest the CBR may carry on with cautious easing. Possible 50bp rate cut to 14.5%	BRL – Current Account (Mar) MXN – Unemployment Rate (Mar) MXN – Economic Activity (Feb)	JPY – CPI inflation (Mar)
Weekend				
Mon, 27 Apr	CNY – Industrial Profits (Mar) KRW – Retail Sales (Mar) KRW – Department Store Sales (Mar) KRW – Discount Store Sales (Mar) SGD – Industrial Production (Mar): +9% YoY accelerating from February TWD – Monitoring Indicator (Mar)			
Tues, 28 Apr	HKD – Trade (Mar) INR – Industrial Production (Mar) KRW – Composite Business Survey Manufacturing (Apr) KRW – Composite Business Survey Non-Manufacturing (Apr) THB – Mfg Production Index ISIC (Mar) THB – Capacity Utilization ISIC (Mar)	HUF – NBH rate decision: status quo expected on oil price uncertainty and domestic uncertainty	BRL – IPCA-15 inflation (Apr) CLP – Overnight Target Rate: we expect a hold at 4.50%	JPY – BoJ Rate Decision (28 Apr): after rate hikes up to 0.75%, further tightening would pause for one year under geopolitical risks and the Takaichi administration's high-pressure economic policy framework. If the BoJ were to proceed with a rate hike around mid-2026, it would place downward pressure on domestic demand, making further hikes difficult for about one year thereafter
Weds, 29 Apr	SGD – Unemployment rate (Mar): 2.0% unchanged from December 2025 THB – BoT Benchmark Interest Rate (29-Apr): unchanged	RUB – Retail sales (Mar)	BRL – Selic rate: we expect a 25bp cut to 14.50%	EUR – Germany and Spain HICP inflation (Apr) USD – FOMC Rate Decision (29 Apr): the Fed is set to remain on hold for a third straight meeting, with most FOMC members pointing to a 'wait-and-see' stance for now

	Asia	EMEA	Latam	G10
Thurs, 30 Apr	CNY – NBS PMI (Apr) CNY – RatingDog China PMI Mfg (Apr) HKD – Money Supply (Mar) INR – Bank Credit YoY (Mar) KRW – Industrial Production (Mar) KRW – Cyclical Leading Index (Mar) PHP – Trade (Mar) SGD – Money Supply (Mar) TWD – GDP YoY (1Q A): Growth of 11.5% YoY THB – BoP Current Account Balance (Mar) THB – Trade (Mar) THB – International Reserves (24-Apr) THB – Forward Contracts (24-Apr)	PLN – Flash CPI (Apr): further increase is likely HUF, CZK – Flash GDP (Q1) TRY – Trade balance (Mar) ZAR – Trade balance (Mar)	MXN – GDP (Q1) COP – Unemployment Rate (Mar) COP – Overnight Lending Rate: we expect a 50bp hike	EUR – Eurozone, Germany, France, Italy and Spain GDP (Q126) EUR – France, Italy, Eurozone HICP inflation (Apr): our take is around 20bp above the HICP _{fix} and around 30bp above the FRCPI _{fix} fixing. This is quite a rare situation only one week before the print. While there remains some uncertainty as there are two weekly oil bulletins missing, we have several arguments in favour of a significant upside surprise vs current market fixings, especially for France GBP – BoE Rate Decision (30 Apr) EUR – ECB Rate Decision (30 Apr): We have decided to maintain our call (hikes in April, June and July); we reaffirm our conviction that the ECB will need to hike at least twice, but we acknowledge that there is a rather high chance that the ECB will not start hiking in April USD – PCE Inflation (Mar): headline should be strong, though not as high as CPI given a lower weight for energy, at around 0.65% MoM. We expect core to remain sticky at around 0.27% MoM with the YoY ticking back up to 3.1% from 3.0% USD – GDP (Q1 A): our initial forecast of 2.7% may be a bit too high, though we think the ATL Fed's latest Nowcast of 1.3% may be a bit too low, as government spending should bounce back after the shutdown concluded
Fri, 1 May	INR – Foreign Reserves (24-Apr) KRW – Trade (Apr): exports 45.0% YoY, imports 15.9% YoY		PEN – CPI (Apr)	USD – ISM Manufacturing (Apr): early regional surveys suggest a possible increase from 52.7 as the bright start to the year could continue

Emerging Markets Research advanced tools

With Red Mount Analytics, we are setting a new standard for market intelligence

**FIVE MAIN ANGLES:****1. Fundamentals.**

Our convictions on the main markets. Specific focuses on individual countries and currencies. Transversal dashboards that allow us to profile specific markets and compare them to their peers.

2. Forecasts and recommendations.

Fast-track access to our main EM macroeconomic forecasts and FX projections.

3. Market monitor.

Check the market action. Seize EM opportunities.

4. Flows and supply.

Data on targeted markets, including volume on the secondary market, liquidity, APAs and maturity.

5. Relative value.

Providing cheap/expensive metrics for EM currencies and models on exchange rates. Our models will show you how we express our view in an EM FX Portfolio, or what's hot in Asian FX markets, among other metrics.

Additional recommendation obligations – available from analyst(s) upon request:

- A list of all the recommendation changes on any financial instrument or issuer disseminated within the last 12 months.
- Where Crédit Agricole CIB is a market-maker or liquidity provider in the financial instruments of the issuer.

Valuation and methodology

Based on their expertise, each analyst defines the information that is relevant to produce their recommendations. This information may change over time. All recommendations focus on FX and fixed income instruments, either spot, cash or derivative markets. Crédit Agricole CIB is currently disclosing investment recommendations either at the issuer level, at the financial instrument level or at the country level. Credit Agricole CIB investment recommendations are based on a risk and reward analysis:

- Risk analysis may be conducted at the financial instruments level. Among the information normally used to define the risks, are (1) publications produced by other research teams within Crédit Agricole CIB (Economics, FX, Credit Research, Interest rate), (2) country analysis, (3) regulatory filings; (4) regular discussions with relevant stakeholders such as experts or regulatory bodies or (5) any other publicly available sources.
- Reward analysis is usually based on valuation models. Valuation may be based on proprietary models or external models provided by sources considered as reliable (eg, Bloomberg). Among other factors, valuation models may be based on relative value models, quantitative models, cross-asset models.
- Investment recommendations may also be based on other technical aspects, including positioning flows and observing the market and underlying movements in particular instruments or issuers. This analysis will take into account key criteria such as market liquidity of the financial instrument at the time of production of the recommendation.

Any change in recommendation is disclosed via specific documents indicating both the new and the previous recommendation and the rationale backing the change.

Credit Agricole CIB expressly disclaims any responsibility for: (i) the accuracy of the models or estimates used in deriving the recommendations; (ii) any errors or omissions in computing or disseminating the valuations; and (iii) any uses to which the recommendations are put. Any valuation provided may be different from the valuation of the same product that Credit Agricole CIB may use for its own purposes, including those prepared in its own financial records.

This research report or summary has been prepared by Crédit Agricole Corporate and Investment Bank or one of its affiliates (collectively "Crédit Agricole CIB") from information believed to be reliable. Such information has not been independently verified and no guarantee, representation or warranty, express or implied, is made as to its accuracy, completeness or correctness.

This report is provided for information purposes only. Nothing in this report should be considered to constitute investment, legal, accounting or taxation advice and you are advised to contact independent advisors in order to evaluate this report. It is not intended, and should not be considered, as an offer, invitation, solicitation or personal recommendation to buy, subscribe for or sell any of the financial instruments described herein, nor is it intended to form the basis for any credit, advice, personal recommendation or other evaluation with respect to such financial instruments and is intended for use only by those professional investors to whom it is made available by Crédit Agricole CIB. Crédit Agricole CIB does not act in a fiduciary capacity to you in respect of this report.

Crédit Agricole CIB may at any time stop producing or updating this report. Not all strategies are appropriate at all times. Past performance is not necessarily a guide to future performance. The price, value of and income from any of the financial instruments mentioned in this report can fall as well as rise and you may make losses if you invest in them. Independent advice should be sought. In any case, investors are invited to make their own independent decision as to whether a financial instrument or whether investment in the financial instruments described herein is proper, suitable or appropriate based on their own judgement and upon the advice of any relevant advisors they have consulted. Crédit Agricole CIB has not taken any steps to ensure that any financial instruments referred to in this report are suitable for any investor. Crédit Agricole CIB will not treat recipients of this report as its customers by virtue of their receiving this report.

Crédit Agricole CIB, its directors, officers and employees may have financial interests or may effect transactions (whether long or short) in the financial instruments described herein for their own accounts or for the account of others, may have positions relating to other financial instruments of the issuer thereof, or any of its affiliates, or may perform or seek to perform securities, investment banking or other services for such issuer or its affiliates, within the regulatory framework set by Article 37 of Delegated Regulation (EU) 2017/565. Crédit Agricole CIB may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Without prejudice to the requirements arising from Article 4 of Delegated Regulation (EU) 2016/958, Crédit Agricole CIB is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. Crédit Agricole CIB has established a "Policy for Managing Conflicts of Interest" which is available upon request. A summary of this policy is published on the Crédit Agricole CIB website [conflict of interest | Crédit Agricole CIB](#). This policy also applies to the investment research activity.

None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party without the prior express written permission of Crédit Agricole CIB. To the extent permitted by applicable securities laws and regulations, Crédit Agricole CIB accepts no liability whatsoever for any direct or consequential loss arising from the use of this document or its contents.
