

Oil prices, rate decisions and tech earnings

Overview

With the news about Iran's potential revision of its peace proposal and the UAE leaving OPEC and OPEC+, the Middle East developments and oil prices continue to impact EM markets, especially energy-import-dependent markets such as India, Thailand, the Philippines and Korea. Moreover, major central bank decisions and tech earnings would be closely monitored. In particular, the Fed is likely to keep rates unchanged to monitor the impact on the US economy and inflation from the Middle East crisis, though it might be less eventful being the last policy meeting with Jerome Powell as the Fed Chair. While there is no peace deal yet, global equity markets have rallied hard in April, on AI optimism, with Korean (22% MoM) and Taiwanese (19%) equities leading the bull run. The US tech earnings this week would be an important guide for those tech-driven EM Asian FX. For the EM central bank decisions, we expect Brazil to cut by 25bp, Colombia to hike by 75bp, while Poland is likely to keep rates unchanged.

Visit our dashboard [EM FX Action at a Glance](#) to check where the recent EM price moves have been taking place amid the Middle East crisis.

EMEA: rates status quo in Turkey and Hungary

- The CBRT kept rates unchanged last week and will remain cautious looking forward when it comes to resuming monetary easing.
- Hungary's central bank will also wait to cut rates.

Turkey: likely to remain reluctant to ease

Last week, the CBRT kept its policy rates unchanged. The repo rate was kept at 37% and the o/n lending rate kept at 40%. The overnight lending facility has remained the main financing channel for the time being. Concretely, this means that short-term rates remain at 40% (as a matter of fact, this is where the average cost of funding is compared to 37% before the war).

We updated our interest rate forecasts, as we believe that the CBRT will remain reluctant to ease, given the recent rebound in oil prices. Both the CBRT and the Ministry of Finance made it clear that the fallout of the war in Iran will cap economic growth and fuel inflation pressure. The return to monetary easing, once the central bank is more comfortable with oil prices, will be a two-step process: (1) returning to the repo facility as the main financing facility; and (2) lowering the repo rate. This second step may have to wait for September (depending on what happens in the Persian Gulf...).

Still, the financial authorities remain committed to the disinflation policy, with single-digit inflation being the main goal. This was reiterated by Finance Minister Mehmet Simsek. As a matter of fact, real interest rates are relatively elevated: at 7% in March (based on actual short-term interest rates and YoY inflation). Capital flows have begun to return to the Turkish market since the second week of April, be it equity or bond flows, suggesting that the stabilisation policy remains credible (and that the carry remains attractive).

We now expect the repo rate to remain at 37% in June 2026 and then to reach 36% in September and 34% in December 2026.

Turkey: CBRT's average cost of funding

sebastien.barbe@ca-cib.com

Hungary: staying put

Yesterday, the Monetary Council of the National Bank of Hungary (NBH) left the base rate unchanged at 6.25%, in line with both our expectations and market consensus. In its press release, the Council noted that "risk premia on domestic assets declined after the parliamentary elections", adding that this decline was "driven in part by expectations related to EU funds and euro adoption". The

statement also highlighted the recent appreciation of the HUF. At the same time, the MPC emphasized that, despite the recent decline, exchange rate volatility remained above the level observed before the outbreak of the Iran war.

The MPC indicated that the March headline inflation reading (1.8% YoY) was in line with the NBH's March projection and reaffirmed its near-term inflation outlook. This baseline scenario assumes a marked increase in headline inflation above the tolerance band in Q326, followed by a gradual return to the central bank's target (3.0% $\pm$ 1ppt.) in H227 in a sustainable manner. The Monetary Council also stressed the need to maintain a "careful and patient approach to monetary policy", citing persistent inflation risks stemming from geopolitical tensions and an uncertain financial market environment. During the press conference, NBH governor Mihály Varga reiterated the central bank's cautious stance, emphasizing that policy easing is not currently warranted.

The overall tone of the press release, together with remarks by governor Varga, align with our baseline scenario that the NBH will keep the policy rate at 6.25% through end-2026, with rate cuts likely to resume in Q127. Although the appreciation of the HUF supports a more favourable inflation outlook, we still project a pronounced pickup in price dynamics starting in Q326, with headline CPI exceeding 4% and remaining above the tolerance band (3.0% $\pm$ 1ppt) until Q227. This expected rebound is likely to be largely driven by the expiration of margin caps on food and selected drugstore items, as well as the phasing out of fuel price controls. In this context, initiating monetary easing in response to currency strength ahead of a renewed rise in inflation would, in our view, risk weakening credibility of the NBH.

jakub.borowski@credit-agricole.pl

Asia: steering through the fog

- **Asia:** Asian economies remain vulnerable to prolonged Middle East disruptions. Markets appear to be underpricing the potential for demand destruction and inflation risks especially if US tariff risks return.
- **China:** Politburo confirmed no imminent easing.

Asia strategy: steering through the fog

An examination of the present state of the Iran conflict reveals that Asia is not out of the woods. While markets have responded positively to the ceasefire, we think caution is still warranted. Oil prices have recovered all losses incurred since the ceasefire commenced, and the Strait of Hormuz remains blocked, with prospects for a definitive conclusion remaining uncertain.

The conflict's impact on Asian consumers is inescapable as most Asian economies are net energy importers, rendering them particularly vulnerable to supply disruptions and price volatility. Approximately 20% of global crude oil transits the Strait of Hormuz, with 90% of this volume destined for Asia, while countries including India, Indonesia, Thailand and South Korea maintain heavy dependence on Middle Eastern crude. LNG warrants particular attention, as an estimated 20% of global LNG transits the Strait of Hormuz, with Qatar representing a substantial portion of this flow. Current estimates indicate that 17% of Qatar's LNG capacity has been compromised due to the conflict, with recovery projected to require three to five years. A shortage of LNG would pose risks to Asia electricity generation with demand set to only increase further as Europe also looks to increase its stockpiles and other potential sources of LNG face limited capacity.

Beyond energy, the conflict poses significant risks to regional supply chains, as critical materials and goods transit the Strait of Hormuz. Key materials at risk include naphtha and methanol, which are foundational chemicals essential for plastics, pharmaceuticals and construction materials production, as well as sulphur and urea, with the Middle East accounting for 20% of global production of these fertiliser components. The region also supplies c.30% of global helium, which is critical for semiconductor manufacturing, as well as bromine and aluminium. To date, economic data has not yet reflected significant impacts from the Iran conflict, with economic surprise indices indicating growth data exceeding expectations and China's export performance remaining robust. The technology sector has been instrumental in sustaining Asian growth resilience, as Asian economies serve as major downstream beneficiaries of substantial AI-related capital expenditure.

Current market pricing suggests limited anticipation of conflict-related disruptions, with a strong recovery in risk sentiment in April, particularly in Taiwan and South Korea. Beyond potential market underestimation of demand destruction, inflation dynamics require careful consideration, as inflation risks are increasingly skewed to the upside due to elevated energy costs, supply chain bottlenecks, and second-round effects through wage pressures. This combination creates a stagflationary environment that appears inadequately reflected in current market pricing. Asian central banks are expected to adopt less accommodative, or potentially restrictive, monetary policy stances. Consistent with this analysis, further USD appreciation and corresponding Asian currency depreciation remain probable, with differentiation expected across the region – the CNY presents a notably resilient outlook, while currencies of oil-importing economies are likely to continue underperforming.

More details can be found in our latest [Emerging Market Presentation](#).

xiaojia.zhi@ca-cib.com
eddie.cheung@ca-cib.com

China: Politburo confirmed no imminent easing

High-frequency indicators so far in April show improving new home sales, still resilient trade activities, but further decline in auto sales. New home sales in 30 major cities rose to 6.6% YoY MTD (vs -11.9% in March), led by 26.3% YoY increases in tier-one cities. Container throughput volume growth at major ports

edged up to 6.7% YoY MTD from 63% in March. Auto sales declined 26% YoY in 1-19 April (vs -15.0% in March). There were continued sequential price increases in chemicals, non-ferrous metals and coal prices, while domestic fuel prices were adjusted lower by 5.4-5.7% on 22 April, first cut so far in 2026. Meanwhile, domestic agricultural product prices have been on decline, led by pork and vegetable prices. Meanwhile, recent releases of broad fiscal revenue growth (-0.1% YoY in Q1 vs -2.9% in 2025) and industrial profit growth (+15.5% in Q1 vs 0.6% in 2025) indicated the support from better economic growth and reflation.

After a resilient growth seen in Q1, there could be more visible impacts from the ongoing Iran conflict in Q2, even though China would likely manage the energy shock relatively better than many manufacturing peers. More specifically, we would be cautious on the impact of potential worsening of aggregate demand externally and the terms-of-trade shock on China's trade, even though still strong AI and tech demand could continue driving China's related exports. The reflation trend should continue, though it would likely add more cost pressures to China's downstream sectors.

The Politburo held on 28 April acknowledged a firm start to 2026 with better-than-expected macro indicators, while it voiced caution over challenges and suggested that the improving trend needs to be solidified. In terms of policies, it has largely reiterated policy stance and work priorities outlined in March NPC. It called for precise and effective implementation of the proactive fiscal and adequately loose monetary policy and continued expansion of domestic demand policies. Regarding the latest development in the Middle East, the Politburo pledged that China would strengthen the level of energy and resources security and counter various uncertainties with the certainty of high-quality development. We think the statement was mostly in line with market expectations, with China continuing its supply-centric development strategy with the focus on technology and industrial innovation, while further strengthening its push in alternative energy and safeguarding energy and food security.

With the CNY TWI also bouncing off its low in April, the near-term outlook for CNY looks supported again. Geopolitics remains an important focus for the CNY as the Iran conflict brews, with markets holding relatively optimistic hopes towards ceasefire talks. A US Senator delegation set to visit China this week will include Senator Steve Daines, a Trump ally, in a positive indication for the scheduled Trump-Xi meeting in Beijing on 14-15 May. Given the positive fixing signals and resilient fundamentals, we continue to look for USD/CNY spot to grind lower heading into the Labor Day holiday.

We expect China rates to return to range trading after the latest bull run, as the relatively flush liquidity conditions have been largely priced in with the short end of CGBs looking rich, while downside resistance surfaces with the 10Y CGB testing 1.75%. We observed some profit-taking flows in the longer end of the curve last Friday following the ultra-long special CGB auctions (low yields but moderate b/c ratios) and ahead of the PBoC's RMB200bn liquidity withdrawal via MLF on Monday. Looking ahead, the pickup in government bond supply and climbing PPI will further test market appetite for duration in Q2. Meanwhile, interbank liquidity conditions will likely play a bigger role in driving market appetite, as trading accounts are currently very active with signs of leverage rebuilding in the bond market.

xiaojia.zhi@ca-cib.com

Korea: BOK's hawkish signal and data releases

From the BOK's April minutes, released on 28 April, most MPC members showed a data-dependent stance given high uncertainties from the Middle East crisis. But it was quite surprising to see some hawkish comments from the MPC members. Some of the hawkish comments include: "the BOK's primary goal is price stability", "the BOK should focus on easing inflationary pressure for some time going forward", "the effects of a high USD/KRW level and high oil prices on inflation spread with a time lag" and "CPI inflation is likely to record around the mid-to-high 2%." After the upside surprise in Korea's Q1 GDP, the market is expecting a higher likelihood of a rate hike this year. We think the MPC members' view may have shifted more towards the hawkish side compared to the April MPC meeting, and we also see a higher probability of the BOK raising its policy rate this year. In the near term, given that the new BOK Governor Shin Hyun-song signalled that he

would want to see how the second-round inflationary effect evolves, before deciding to raise its policy rate, we think the BOK would monitor inflation and inflationary expectation data. The BOK's next rate decision on 28 May will be an important meeting as the BOK will update its GDP and CPI inflation forecasts together with its six-month forward guidance, giving a clearer signal for the BOK's next move.

On 30 April, we expect more net KTB purchases by foreign investors related to the FTSE World Government Bond Index inclusion, after the Japanese holiday on 29 April. In terms of data releases, Korea's March industrial production (30 April), April trade (1 May) and April CPI inflation (6 May) will be important given that the recent upside surprise in the Q1 GDP print led the market to expect a higher chance of a rate hike this year. For industrial production, we expect solid growth of 4.3% YoY. While there will be production cuts in oil refinery and chemical production due to the Middle East crisis, we think the impact on overall industrial production would be limited given that their share in the index is about 9% and that semiconductor and automobile production, with 18.7% and 11.4% shares respectively, are likely to show resilient growth. We also expect April exports and imports to grow by 45.0% YoY and 15.9% YoY respectively. Strong export momentum, mainly focused on the semiconductor sector, would keep the wide trade surplus around USD22.44bn, much larger than USD4.80bn in April 2025, though it is likely to be smaller than USD26.24bn in March, given higher energy import prices. After checking industrial production and trade data, the focus will move to April CPI inflation. We expect April CPI inflation to rise by 0.4% MoM, leading to 2.5% YoY. Inflation above the BOK's 2% target would weigh on KTB yields. We will also monitor any comments from the BOK after the inflation print is released.

yeonjin.kim@ca-cib.com

Philippines: 25bp hike done, more signalled

On 23 April, the Philippines' BSP hiked its policy rate by 25bp in line with our expectation, while the market was split between no change and a 25bp hike. At the press conference, the BSP's overall stance looked more hawkish than expected as it hinted at further tightening. The BSP said that it may hike further depending on data. Also on 24 April, Governor Eli Remolona said that the BSP will do as many hikes as necessary and that he expects to see a succession of modest rate hikes at the moment. Moreover, we found it surprising that the BSP considered a 50bp hike at the April meeting. Regarding the growth outlook, the BSP expects GDP growth of 4.3% in 2026 but expects GDP growth to rebound to as high as 6% in 2027. For the inflation outlook, the BSP revised its inflation forecasts for 2026 and 2027 higher to 6.3% and 4.3% respectively, from 5.1% and 3.8% previously. The new forecasts, which are above the BSP's 2-4% target, support further BSP rate hikes. Given the BSP's strong hawkish comments, we think the chance of another rate hike on 18 June looks high, though April and May inflation and growth data will be important.

yeonjin.kim@ca-cib.com

Thailand: BoT delivered a neutral pause in April

The BoT kept the policy rate unchanged at 1% in the April meeting. The decision was largely expected and turned out to be a non-event for the market with limited movement in the rates market.

The BoT kept a relatively neutral stance in its forward guidance, suggesting the current policy rate remains appropriate to support a slowing economy and navigate heightened uncertainty. It stated it would closely monitor the impacts of the war and other factors on inflation risks going forward. Overall, we think the policy tone from the BoT today has been consistent with previous communication and supports our view of seeing a pause from the BoT for the rest of the year. Currently, the THOR swap market is pricing in about a 50% chance of a hike in the rest of 2026, and a full 25bp hike by the April 2027 meeting.

While Thai officials have previously warned that average Thailand headline CPI could rise to 3.67% in Q2 from -0.5% in Q1, we expect that the BoT would continue to signal that there is no need for an urgent hike against supply-driven inflation. Back in 2022-23, the BoT was a late mover among ASEAN peers to kick off the hiking cycle. Though the BoT has significantly raised export growth forecasts for

the year (8.1% YoY vs 0.6% prior), the likely weak domestic recovery would continue to allow the BoT to prioritise growth support before seeing more concrete signs of sustainable inflation.

Latam: trading oil and elections exposure

- The latest election polls point to starkly diverging political scenarios in Colombia and Brazil. In Colombia, the far-left continuity candidate Ivan Cepeda is seen as the favourite, while in Brazil the right-leaning challenger Flavio Bolsonaro appears to have a slight edge.
- While it is still too soon to conclude with certainty, we lean towards a market-friendly presidential victory by Bolsonaro in Brazil and by Cepeda in Colombia. This is one of the reasons we issued a long BRL vs COP recommendation on 27 April (See EM Trade Idea [“Long BRL/COP”](#)) that we continue to maintain.

Long BRL vs COP: trading oil and elections exposure

The latest Invaer poll published on 26 April revealed a strong lead for Ivan Cepeda, a continuity candidate from the ruling Historic Pact coalition. Among the 13 ranked candidates, Cepeda received the largest number of votes at 44.3%. Meanwhile, one of the polled candidates, Claudia Lopez (3.6% of voting intention) abandoned her own campaign to join Cepeda's. Cepeda was followed by the far-right candidate Abelardo de la Espriella (21.5%) in second place and Paloma Valencia (19.8%) of the traditional right in third.

Colombian will head to the first round of presidential elections on 31 May, with a runoff likely in June. In a hypothetical run-off scenarios, the poll showed that Cepeda would lead against both candidates by a wide margin (Cepeda vs Espriella 54.6% vs 42.6%) and Cepeda vs Valencia 51.2% vs 46.6%).¹

Betting markets have been repricing the implied odds of who will win the presidential election, with Cepeda now seen as the favourite.

Implied odds of presidential victory in Colombia

Polymarket implied probability

Source: Macrobond

Meanwhile, the polls in Brazil show that Flavio Bolsonaro, the son of former president Jair Bolsonaro, is in a statistical tie in a potential run-off scenario vs President Luiz Inacio Lula da Silva. The betting markets are slightly more optimistic about Bolsonaro's victory, as are local investors.

¹ <https://www.noticiascaracol.com/politica/elecciones-colombia/resultados-encuesta-invamer-intencion-de-voto-primera-vuelta-presidencial-rg10>

Implied odds of presidential victory in Brazil

Source: Macrobond

While it is still too soon to conclude with certainty, we lean towards a market-friendly presidential victory by Bolsonaro in Brazil and by Cepeda in Colombia. This is one of the reasons we issued a long BRL vs COP recommendation on 27 April (See EM Trade Idea "[Long BRL/COP](#)") that we continue to maintain.

In addition, we expect the BRL to retain support from the strong terms of trade. Both currencies benefit from higher oil prices, which we expect to remain elevated for some time, regardless of the timing and nature of the resolution of the conflict in the Middle East. The BRL, however, has a stronger link to energy prices in practice as its production has reached 5 mb/d and expanding, while Colombia's hydrocarbon exports are declining due to a ban on new permits for reserve exploration imposed by President Gustavo Petro's current administration. Should Ivan Cepeda win, the ban is likely to remain in place, resulting in Colombia's dwindling energy exports.

The trade has a positive carry, although we do expect the relative carry to shrink as Brazil's central bank (BCB) continues to ease policy gradually, while Colombia's central bank (BanRep) is likely to tighten monetary policy a bit more. We expect the BCB to reduce the Selic rate by 25bp this week to 14.50% and BanRep to hike by 75bp to 12%. The risks are skewed towards a hawkish cut in Brazil and a dovish hike in Colombia, as relates to the accompanying communication.

olga.yangol@ca-cib.com

Trade ideas

- **Asia:** Still paying China 5Y repo NDIRS, holding 5Y-2Y THOR NDOIS curve flattener and buy TWD vs G3 basket
- **Latam:** We establish a long BRL vs COP position

Asia

Recommendation	Entry date/time	Entry level	Target	Stop loss	Now	Performance
Pay China 5Y repo NDIRS	20 Mar 26 (08:11 CET)	1.62%	1.85%	1.50%	1.55%	-7.2bp
jeffrey.zhang@ca-cib.com China: taking profit on long 5Y swap spread; entering pay on 5Y NDIRS Rationale: The PBoC's statement released on 18 March hinted at the reduced probability of policy rate cuts. We revised our inflation forecast for 2026 on the back of likely higher oil prices for longer and expect onshore investors to stay cautious on duration risk in the near term. We have entered a trade to pay 5Y repo NDIRS at 1.62% on reduced expectations of PBoC policy rate cuts and the risk of broadening inflation.						
5Y-2Y THOR NDOIS curve flattener	05 Feb 26 (08:00 CET)	25.5bp	5bp	40bp	39bp	-13.5bp
jeffrey.zhang@ca-cib.com Thailand: THOR NDOIS curve flattener Rationale: We expect Thailand rates to be more sensitive to the election result vs FX, and the bar for further THOR NDOIS curve steepener can be high according to our scenario analysis.						
Buy TWD vs G3 basket	05 Feb 26 (12:15 HKT)	USD/TWD: 31.68 EUR/TWD: 37.57 JPY/TWD: 0.2039	+4%	-2%	USD/TWD : 31.58 EUR/TWD : 36.98 JPY/TWD: 0.1979	+1.6%
eddie.cheung@ca-cib.com Buy TWD vs G3 basket Rationale: The TWD may find support despite the choppy USD, given Taiwan's economy continues to benefit from AI demand. NDF points are now trading at a premium which makes holding a TWD long less prohibitive than before.						

NEW Trade ideas opened since the previous EM Pulse
 For NDFs: target, stop-loss and current level (now) calculated on the basis of the remaining maturity
 Performance for FX trades is carry-adjusted

Source: Crédit Agricole CIB

CACIB EM portfolio flow indexes

Daily portfolio flows – eight countries, debt and equity

Weekly portfolio flows – 27 EMs, debt and equity

Country performance index over the past week – debt

Country performance index over the past week – equity

Portfolio flow warning – eight countries, debt and equity

Cumulative portfolio flows throughout the year

Eight countries = the BRL, HUF, INR, IDR, KRW, PHP, THB and ZAR

The 'EM group' refers to the 25 countries on the equity side and the 27 on the bond side for which we have weekly, monthly or quarterly equity and debt portfolio flow data

Full details regarding the construction of the indexes and our methodology can be found in [EM portfolio flows: introducing our in-house flows indexes](#)

Calendar

Main data/event calendar

	Asia	EMEA	Latam	G10
Weds, 29 Apr		RUB – Retail sales (Mar)	BRL – Selic rate: we expect a 25bp cut to 14.50%	USD – FOMC Rate Decision (29 Apr): the Fed is set to remain on hold for a third straight meeting, with most FOMC members pointing to a 'wait-and-see' stance for now
Thurs, 30 Apr	CNY – NBS PMI (Apr): we expect a moderate easing of manufacturing PMI to 50.0 HKD – Money Supply (Mar) INR – Bank Credit YoY (Mar) KRW – Industrial Production (Mar): 4.3% YoY with strong chip production KRW – Cyclical Leading Index (Mar) KRW – Retail Sales (Mar) KRW – Department Store Sales (Mar) KRW – Discount Store Sales (Mar) PHP – Trade (Mar) SGD – Money Supply M1 YoY (Mar) TWD – GDP YoY (Q1 A): growth of 11.5% YoY THB – BoP Current Account Balance (Mar) THB – Trade (Mar) THB – Trade Balance (Mar) THB – International Reserves (24-Apr) THB – Forward Contracts (24-Apr)	PLN – Flash CPI (Apr): further increase is likely HUF, CZK – Flash GDP (Q1) TRY – Trade balance (Mar) ZAR – Trade balance (Mar)	MXN – GDP (Q1) COP – Unemployment Rate (Mar) COP – Overnight Lending Rate: we now expect a 75bp hike with potential signalling of a pause so as to avoid being seen as political going into the election	EUR – Eurozone, Germany, France, Italy and Spain GDP (Q126) EUR – France, Italy, Eurozone HICP inflation (Apr): our take is around 20bp above the HICPx fixing and around 30bp above the FRCPIx fixing. This is quite a rare situation only one week before the print. While there remains some uncertainty as there are two weekly oil bulletins missing, we have several arguments in favour of a significant upside surprise vs current market fixings, especially for France GBP – BoE Rate Decision (30 Apr) EUR – ECB Rate Decision (30 Apr): we have decided to maintain our call (hikes in April, June and July); we reaffirm our conviction that the ECB will need to hike at least twice, but we acknowledge that there is a rather high chance that the ECB will not start hiking in April. USD – PCE Inflation (Mar): headline should be strong, though not as high as CPI given a lower weight for energy, at around 0.65% MoM. We expect core to remain sticky at around 0.27% MoM with the YoY ticking back up to 3.1% from 3.0% USD – GDP (Q1 A): our initial forecast of 2.7% may be a bit too high, though we think the ATL Fed's latest Nowcast of 1.3% may be a bit too low, as government spending should bounce back after the shutdown concluded
Fri, 01 May	INR – Foreign Reserves (24-Apr) KRW – Trade (Apr): exports 45.0% YoY, imports 15.9% YoY		PEN – CPI (Apr)	USD – ISM Manufacturing (Apr): early regional surveys suggest a possible increase from 52.7 as the bright start to the year could continue
Weekend				
Mon, 04 May	INR/IDR/KRW/PHP/TWD/VND – PMI Mfg (Apr F) IDR – Trade (Mar) IDR – CPI (Apr)	TRY – CPI (Apr)	BRL – S&P Global Manufacturing PMI (Apr) MXN – S&P Global Manufacturing PMI (Apr) CLP – Economic Activity (Apr)	
Tues, 05 May	HKD – GDP YoY (Q1 A): 4.4% YoY in a pickup from Q425 IDR – GDP YoY (Q1) PHP – CPI (Apr): 5.3% YoY with higher energy prices and low base SGD – Retail Sales (Mar) THB – PMI Mfg (Apr)	TRY – Industrial production (Mar)	COP – Quarterly Monetary Policy Report	USD – ISM Services (Apr): may edge modestly lower from a strong reading of 54.0, but likely to remain solidly in expansion USD – JOLTS (Mar): job openings have been choppy, though have kept the vacancy-to-unemployment ratio just a bit below 1x

	Asia	EMEA	Latam	G10
Weds, 06 May	CNY – RatingDog China PMI Composite (Apr) HKD – Retail Sales (Mar) INR – PMI (Apr F) INR – PMI Services (Apr F) KRW – CPI (Apr) : 2.5% YoY, 0.4% MoM with higher oil prices leading to other price hikes PHP – Unemployment Rate (Mar) SGD/HKD – S&P PMI (Apr) TWD – Foreign Reserves (Apr) THB – CPI (Apr)	PLN – NBP rate decision : status quo HUF – Industrial production (Mar) CZK – Flash CPI (Apr): to go up on fuel prices	BRL – S&P Global Services and Composite PMI (Apr) COP – Monetary Policy Minutes	
Thurs, 07 May	CNY – Foreign Reserves (Apr) HKD – Foreign Reserves (Apr) KRW – Foreign Reserves (Apr) MYR – BNM Overnight Policy Rate (07-May) PHP – Foreign Reserves (Apr) PHP – GDP YoY (Q1) : 3.1% YoY, 0.8% QoQ SGD – Foreign Reserves (Apr) TWD – CPI (Apr) : 1.6% YoY in a pickup from 1.2% YoY THB – Consumer Confidence (Apr): 1.7%	CZK – CNB rate decision : new projection, no change in interest rates, wait-and-see mode continues HUF – Retail sales (Mar) CZK – Industrial production (Mar) ZAR – Electricity production and consumption (Apr)	BRL – Industrial Production (Mar) BRL – Trade Balance (Apr) MXN – CPI, Bi-Weekly CPI (Apr) MXN – Overnight Rate : we expect a hold at 6.75%	
Fri, 08 May	IDR – Foreign Reserves (Apr) KRW – BoP (Mar) MYR – Industrial Production YoY (Mar) MYR – Foreign Reserves (30-Apr) TWD – Trade (Apr): exports to rise 58% YoY powered by tech	EGP – Core CPI (Apr - due 8-12/05) HUF – CPI (Apr): going up	CLP – CPI (Apr)	USD – Employment Report (Apr) : headline NFP likely to slow sharply from +178k in March after mild weather and ending strikes boosted last month, but we expect it to remain in positive territory. The unemployment rate may be unchanged

Emerging Markets Research advanced tools

With Red Mount Analytics, we are setting a new standard for market intelligence

FIVE MAIN ANGLES:

1. **Fundamentals.**

Our convictions on the main markets. Specific focuses on individual countries and currencies. Transversal dashboards that allow us to profile specific markets and compare them to their peers.

2. **Forecasts and recommendations.**

Fast-track access to our main EM macroeconomic forecasts and FX projections.

3. **Market monitor.**

Check the market action. Seize EM opportunities.

4. **Flows and supply.**

Data on targeted markets, including volume on the secondary market, liquidity, APAs and maturity.

5. **Relative value.**

Providing cheap/expensive metrics for EM currencies and models on exchange rates. Our models will show you how we express our view in an EM FX Portfolio, or what's hot in Asian FX markets, among other metrics.

Our new interactive data website features:

- | | |
|-------------------------------|---|
| 25bn data points | 9 product classes (eg, EM, FX, Sustainable, Credit) |
| over 4,500 interactive charts | 6 categories (eg, flows, fundamentals, RV) |
| over 1,000 proprietary models | 90% exclusive content |
| over 250 use cases | AI modelling |
| over 150 thematic reports | |

It's the future of market research!

But that's not all – our platform will soon feature a generative AI bot exclusively trained on our research publications, and we are currently fine-tuning a big batch of new reports to be launched in Q126.

Additional recommendation obligations – available from analyst(s) upon request:

- A list of all the recommendation changes on any financial instrument or issuer disseminated within the last 12 months.
- Where Crédit Agricole CIB is a market-maker or liquidity provider in the financial instruments of the issuer.

Valuation and methodology

Based on their expertise, each analyst defines the information that is relevant to produce their recommendations. This information may change over time. All recommendations focus on FX and fixed income instruments, either spot, cash or derivative markets. Crédit Agricole CIB is currently disclosing investment recommendations either at the issuer level, at the financial instrument level or at the country level. Credit Agricole CIB investment recommendations are based on a risk and reward analysis:

- Risk analysis may be conducted at the financial instruments level. Among the information normally used to define the risks, are (1) publications produced by other research teams within Crédit Agricole CIB (Economics, FX, Credit Research, Interest rate), (2) country analysis, (3) regulatory filings; (4) regular discussions with relevant stakeholders such as experts or regulatory bodies or (5) any other publicly available sources.
- Reward analysis is usually based on valuation models. Valuation may be based on proprietary models or external models provided by sources considered as reliable (eg, Bloomberg). Among other factors, valuation models may be based on relative value models, quantitative models, cross-asset models.
- Investment recommendations may also be based on other technical aspects, including positioning flows and observing the market and underlying movements in particular instruments or issuers. This analysis will take into account key criteria such as market liquidity of the financial instrument at the time of production of the recommendation.

Any change in recommendation is disclosed via specific documents indicating both the new and the previous recommendation and the rationale backing the change.

Credit Agricole CIB expressly disclaims any responsibility for: (i) the accuracy of the models or estimates used in deriving the recommendations; (ii) any errors or omissions in computing or disseminating the valuations; and (iii) any uses to which the recommendations are put. Any valuation provided may be different from the valuation of the same product that Credit Agricole CIB may use for its own purposes, including those prepared in its own financial records.

Disclaimer

© 2026, **CRÉDIT AGRICOLE CORPORATE AND INVESTMENT BANK** All rights reserved.

This research report or summary has been prepared by Crédit Agricole Corporate and Investment Bank or one of its affiliates (collectively "Crédit Agricole CIB") from information believed to be reliable. Such information has not been independently verified and no guarantee, representation or warranty, express or implied, is made as to its accuracy, completeness or correctness.

This report is provided for information purposes only. Nothing in this report should be considered to constitute investment, legal, accounting or taxation advice and you are advised to contact independent advisors in order to evaluate this report. It is not intended, and should not be considered, as an offer, invitation, solicitation or personal recommendation to buy, subscribe for or sell any of the financial instruments described herein, nor is it intended to form the basis for any credit, advice, personal recommendation or other evaluation with respect to such financial instruments and is intended for use only by those professional investors to whom it is made available by Crédit Agricole CIB. Crédit Agricole CIB does not act in a fiduciary capacity to you in respect of this report.

Crédit Agricole CIB may at any time stop producing or updating this report. Not all strategies are appropriate at all times. Past performance is not necessarily a guide to future performance. The price, value of and income from any of the financial instruments mentioned in this report can fall as well as rise and you may make losses if you invest in them. Independent advice should be sought. In any case, investors are invited to make their own independent decision as to whether a financial instrument or whether investment in the financial instruments described herein is proper, suitable or appropriate based on their own judgement and upon the advice of any relevant advisors they have consulted. Crédit Agricole CIB has not taken any steps to ensure that any financial instruments referred to in this report are suitable for any investor. Crédit Agricole CIB will not treat recipients of this report as its customers by virtue of their receiving this report.

Crédit Agricole CIB, its directors, officers and employees may have financial interests or may effect transactions (whether long or short) in the financial instruments described herein for their own accounts or for the account of others, may have positions relating to other financial instruments of the issuer thereof, or any of its affiliates, or may perform or seek to perform securities, investment banking or other services for such issuer or its affiliates, within the regulatory framework set by Article 37 of Delegated Regulation (EU) 2017/565. Crédit Agricole CIB may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Without prejudice to the requirements arising from Article 4 of Delegated Regulation (EU) 2016/958, Crédit Agricole CIB is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. Crédit Agricole CIB has established a "Policy for Managing Conflicts of Interest" which is available upon request. A summary of this policy is published on the Crédit Agricole CIB website [conflict of interest | Crédit Agricole CIB](#). This policy also applies to the investment research activity.

None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party without the prior express written permission of Crédit Agricole CIB. To the extent permitted by applicable securities laws and regulations, Crédit Agricole CIB accepts no liability whatsoever for any direct or consequential loss arising from the use of this document or its contents.
